

# Shakti Prasad Mohapatra

Senior QA Engineer · Payments & FinTech Domain · 4+ Years Experience

Bangalore, Karnataka | 8763704542 | shakti0946@gmail.com | <https://www.linkedin.com/in/shakti-prasad-mohapatra-92a9901ba> |

## PROFESSIONAL SUMMARY

---

Results-driven Senior QA Engineer with 4+ years of deep, hands-on experience in the global Payments and FinTech ecosystem. Specialized in end-to-end quality assurance for POS applications, Settlement & Reconciliation platforms, Terminal Management Systems, Automated Fuel Dispensing (AFD) systems, and consumer-facing Mobile Payment applications. Proven track record delivering high-quality releases for tier-1 clients including Verifone, Geidea, and Gilbarco (Costco North America). Expertise spans EMV transaction processing, ISO-8583 & NEXO protocol testing, L2 Kernel and L3 Card Certifications across Visa, Mastercard, Amex, UnionPay, and Diners Club, REST API automation (Python & Selenium), mobile app testing (iOS & Android), and database validation. Experienced QA lead who has built and managed QA teams, driven client-facing communication with international stakeholders, and delivered production-stable releases on Google Play Store and Apple App Store. Adept at multi-level log analysis, defect lifecycle management, and cross-functional collaboration in Agile/Scrum environments.

## CORE COMPETENCIES

---

- EMV Transaction Processing (Contact, Contactless, Magnetic Stripe)
- ISO-8583 Protocol Testing & Message Parsing
- NEXO Protocol Validation & Certification
- L2 Kernel & L3 Card Certification (Visa, Mastercard, Amex, UnionPay, Diners Club)
- POS Application Testing — Functional, Integration & End-to-End
- Settlement & Reconciliation Platform Testing
- Merchant Onboarding & Terminal Provisioning (MID/TID Configuration)
- REST API Testing (Postman, Python) & Test Automation (Selenium WebDriver)
- Terminal Management System (TMS) Testing
- Smoke, Regression, Sanity & UAT Testing
- Production Support, Triage & Hotfix Validation
- Multi-Level Log Analysis (Host, Acquirer, Terminal Logs)
- Mobile App Testing — iOS (App Store) & Android (Google Play)
- Database Testing & Validation (SQL / DBeaver)
- QA Leadership, Team Management & Mentoring
- Payment Gateway Integration Testing
- Agile / Scrum Methodology & Sprint Management
- Defect Lifecycle Management & Root-Cause Analysis
- Performance Testing Oversight (JMeter)
- CI/CD Pipeline Monitoring (Jenkins)
- JIRA & Zephyr Test Management & Reporting
- Cross-Functional & Client-Facing Communication
- Test Planning, Test Strategy & Traceability Matrix
- Security & Compliance Awareness (PCI DSS, EMV Standards)

## TECHNICAL PROFICIENCIES

---

**Payment Protocols & Standards:** EMV (Contact, Contactless, Mag-Stripe), ISO-8583, NEXO, PCI DSS Awareness, In-App Payments, 3DS Authentication Awareness

**Terminal Hardware:** Verifone, Geidea, Lavego, Pine Labs, Gilbarco SmartCRIND (GSOM & Omnia Boards)

**Testing Tools & Platforms:** Postman, Selenium WebDriver, UL Certification Tool, ICC Tool, WinSCP, PuTTY, JIRA, Confluence, DBeaver, TestRail, Zephyr

**Automation & Scripting:** Python, Selenium WebDriver, REST API Automation, Shell Scripting (Linux CLI), Git/GitHub

**Mobile Testing:** Android (Google Play), iOS (TestFlight / App Store), Cross-Platform Functional & Regression Testing

**Transaction Types:** Purchase, Refund, Pre-Authorization, Settlement, Reversal, Batch Upload, Deferred Payments, In-App Coin Purchase, QR Payments

**Databases:** SQL Querying, DBeaver, QA & Pre-Prod Environment Access, Transaction Lifecycle DB Validation

**CI/CD & DevOps:** Jenkins (Pipeline Monitoring, Build Triggering, Regression Scheduling, Failure Triage)

**Test Management:** JIRA (Defect Tracking, Sprint Management), Zephyr (Test Case Authoring, Execution Cycles, Test Reporting)

**Version Control:** Git, GitHub (Branching, Commits, Pull Requests)

**Operating Systems:** Windows, Linux (CLI Navigation, Log Extraction, Shell Scripting)

**Methodologies:** Agile/Scrum, SDLC, Black-Box Testing, Functional, Integration, E2E, UAT, Smoke, Regression, Exploratory Testing

## PROFESSIONAL EXPERIENCE

---

### Girmiti Softwares Pvt Ltd

March 2022 – Present

Software QA Engineer — Payments & FinTech Domain

#### Gilbarco Veeder-Root — AFD Payment Systems | Client: Costco (North America)

- Spearheaded Smoke, Regression, and Sanity testing for production releases deployed across 500+ Costco fueling stations in North America, ensuring zero critical-defect escapes to production.
- Conducted structured root-cause analysis on production-impacting bugs on Gilbarco SmartCRIND fuel dispensing machines, reducing average defect resolution time by 35% through systematic multi-layer log analysis.
- Validated 15+ payment and loyalty workflows including Fueling, Fueling with Carwash, Carwash Kiosk, Membership Billing, Deferred Payments, QR Scanner Payments, ShopCards, and Coupon Redemptions.
- Performed multi-layer log analysis across Host logs, Acquirer logs, and Terminal logs — extracted via WinSCP and PuTTY from Linux-based GSOM and Omnia board environments — to accurately diagnose transaction failures and authorization discrepancies.
- Tested all three EMV card entry modes (Contact Chip, Contactless/NFC, and Magnetic Stripe) for Sale and Pre-Authorization transactions, including AFD-specific deferred transaction flows.
- Managed full defect lifecycle using JIRA — raised, tracked, and closed defects with detailed reproduction steps, severity classification, and release linkage — maintaining a clean sprint board across all production release cycles.
- Executed structured test cycles in Zephyr for Smoke, Regression, and Sanity passes, generating execution reports and traceability matrices shared with stakeholders before each production deployment.
- Monitored Jenkins CI/CD pipelines to track automated build status, trigger regression test runs post-deployment, and triage build failures in coordination with the development team.
- Collaborated directly with cross-functional American teams, managing asynchronous and real-time communication across time zones to ensure seamless sprint delivery and production readiness.
- Developed proficiency in Linux CLI and shell scripting to automate log collection, reducing manual effort in terminal diagnostics and accelerating defect triage cycles.

#### Sensei Sigma — Mobile Trading Platform with In-App Payments | Client: USA

- Led a QA team of 4 engineers across the full SDLC — from requirements gathering through UAT, production deployment, and post-release stabilization — for a B2C trading application released on Google Play Store and Apple App Store.

- Owned end-to-end QA strategy covering two client-facing frontends (Android & iOS mobile app and a React-based Admin Web Portal) plus a comprehensive backend API test suite, ensuring 360-degree quality coverage across all application layers.
- Designed and executed REST API test suites using Python and Selenium, automating critical payment and user journey endpoints including user registration, coin allocation, trading data feeds (live market APIs), and in-app payment processing flows.
- Owned in-app payment testing: validated end-to-end card payment flows for coin purchases, covering card tokenization, payment gateway integration, transaction success/failure scenarios, and post-payment balance reconciliation in the database.
- Performed thorough database validation using DBeaver across QA and pre-production environments — verifying new user creation, coin balance integrity, payment records, and transaction consistency across all test scenarios.
- Oversaw performance testing activities, working closely with performance engineers to review test plans, interpret JMeter results, and triage performance bottlenecks prior to production releases.
- Served as the primary QA point-of-contact for the US-based client — conducting live feature demonstrations, presenting proof-of-concepts (POCs), gathering client feedback, and communicating change requests to development, Scrum Masters, and Business Analysts.
- Provided production support post-deployment, monitoring application stability, triaging live defects, and coordinating hotfix validation until the application achieved stable production status.

### **Geidea — Settlement, Reconciliation & Merchant Onboarding | Client: Saudi Arabia**

- Owned end-to-end QA for the Settlement and Reconciliation platform, tracking 1,000+ simulated daily transactions through their complete lifecycle — from authorization initiation to final merchant credit — using Geidea's specialized monitoring portals.
- Validated the full Merchant Onboarding workflow: merchant creation, POS terminal assignment, MID/TID provisioning and configuration, and transaction initiation from newly onboarded terminals — covering the complete onboarding-to-settlement pipeline.
- Operated within Geidea's fully integrated acquiring ecosystem (covering both issuing and acquiring internally), gaining rare end-to-end visibility into payment flows across 20+ partnered banking institutions.
- Engineered and executed comprehensive REST API test suites in Postman, simulating all transaction types (Purchase, Refund, Pre-Authorization, Reversal, Batch Settlement) across multiple card entry modes and card schemes, achieving 98%+ scenario coverage.
- Managed all testing activities in JIRA and Zephyr — authored test cases, maintained execution cycles for each sprint, logged and tracked defects end-to-end, and generated test summary reports presented to the client at the end of every release cycle.
- Provided critical production support, diagnosing and triaging live settlement and reconciliation discrepancies to minimize merchant financial impact and maintain strict SLA compliance.
- Collaborated with the Saudi Arabian client and a cross-cultural Ukrainian development team, managing multi-timezone sprint ceremonies (planning, standups, retrospectives) to consistently deliver on-time sprint commitments.

### **L2 Kernel & L3 Card Certifications — Multi-Scheme Terminal Certification**

- Executed L3 (Level 3) Card Certifications for 5 major international payment schemes — Visa, Mastercard, Amex, UnionPay, and Diners Club — achieving successful certification on first or second submission cycle across all schemes.
- Led L2 Kernel Certification for internal SPOS applications, validating EMV contact and contactless kernel compliance against scheme-mandated test cases, resulting in first-pass certification approval.
- Operated industry-standard UL Certification Tool and ICC Tool to generate certification test traces, manage test case execution matrices, and compile complete certification evidence packages for scheme submission.
- Led pre-certification testing for the Lavego POS application using NEXO protocols (ISO-8583 alternative), successfully achieving NEXO certification for Visa and Mastercard — broadening the organization's certifiable terminal portfolio.
- Built deep cross-platform expertise across Verifone, Geidea, Lavego, and Pine Labs terminal ecosystems, enabling accelerated onboarding and ramp-up on new terminal certification engagements.

## Verifone — POS Applications & Backend Payment Systems

- Performed extensive functional and integration testing of Verifone POS applications across the complete transaction spectrum: Purchase, Refund, Pre-Authorization, Settlement, Reversal, and Batch Upload — including offline-capable terminal scenarios.
- Tested the Terminal Management System (TMS) end-to-end, validating terminal registration, remote configuration pushes, firmware update workflows, and terminal modification scenarios across 200+ deployed terminal instances.
- Executed backend API testing via Postman to initiate transactions directly against the payment processor, tracing end-to-end authorization flows through backend logs to validate processing integrity and response code accuracy.
- Gained foundational exposure to payment processor integration architecture: authorization request/response flows, settlement file generation, exception handling, and reversal processing at the processor level.

## EDUCATION

---

Bachelor of Technology (B.Tech) — Parala Maharaja Engineering College, BPUT University, Odisha

2020
